

A screenshot of the JWT Debugger website. The browser's address bar shows 'www.jwt.io'. The website has a dark theme. At the top, there's a navigation bar with 'JWT Debugger' and links to 'Debugger', 'Introduction', 'Libraries', and 'Ask'. Below this is a large heading 'JSON Web Token (JWT) Debugger'. A subheading reads: 'Decode, verify, and generate JSON Web Tokens, which are an open, industry standard RFC 7519 method for representing claims securely between two parties.' There are two main tabs: 'JWT Decoder' (selected) and 'JWT Encoder'. Under 'JWT Decoder', there's a text input area with the instruction 'Paste a JWT below that you'd like to decode, validate, and verify.' To the right of the input is a 'Generate example' button and a 'Select signing algorithm' dropdown menu. Below the input area is a section for 'Encoded Token' with a checkbox for 'Enable auto-focus'. To the right is a 'Decoded Header' section with two tabs: 'JSON' (selected) and 'Claims Breakdown'. The 'JSON' tab shows a JSON object: { "alg": "HS256", "typ": "JWT" }. The 'Encoded Token' section shows a long string of characters.
